

Is it Behavioural or Neurological?

Dr. Melanie Rockman BVSc, MANZCVS (Behaviour). Behaviour Resident (ACVB),

Dr. Alex Hamilton BA, VetMB, MRCVS - Neurology Registrar, MANZCVS (Radiology)

Keywords: Behavioural, Neurological, Lysosomal storage disease, Abnormal repetitive behaviour

Introduction

This session discusses the complexities involved in managing cases with both behavioural and neurological aspects, illustrated by a particularly challenging case featuring multiple concerns.

Diagnostic Pathways

The discussion centres on the detailed process of diagnosing patients where behavioural symptoms may mask or overlap with underlying neurological disorders. It highlights the need for thorough history-taking, advanced imaging, and diagnostic testing, while stressing the value of interdisciplinary collaboration to distinguish primary behavioural issues from those with a neurological basis.

Abnormal Repetitive Behaviour and Lysosomal Storage Disease

The presenters examine the challenges in assessing abnormal repetitive behaviours, including those associated with lysosomal storage diseases.

Clinical Strategies and Considerations

Attendees are introduced to the subtleties encountered when behavioural and neurological signs intersect. The session offers practical approaches to assessment and management, grounded in current evidence and clinical experience.

Ethics, Welfare, and Treatment

An exploration of ethical considerations, patient welfare, and management strategies is included, providing guidance for the treatment of cases where behavioural and neurological conditions coexist.
